## SURFACE PREP

**Bare Metal:** Remove all rust scale with wire brush or sander. Remove oil or grease with paint thinner. Prime with rust inhibiting primer.  
**Painted Metal:** Remove loose or peeling paint and rust scale with wire brush or sander. Remove oil or grease with paint thinner. Prime any bare metal with rust inhibiting primer. **Painted Surfaces: (General)** Make sure surface is clean, dry and free of loose paint, dirt, wax, grease, etc. Sand glossy areas. Spot prime absorbent areas.

## APPLICATION

Surface must be dry and free of dirt, dust, grease or wax. Protect surrounding areas with drop cloths. Always apply paint at room temperature (70°-80° F). To ensure color uniformity and prevent clogging, SHAKE CAN vigorously for at least one minute after mixing ball rattles. Hold can in an upright position 16" to 20" from the object being sprayed. Press spray button firmly. Use steady, even strokes while spraying. Several thin coats will result in a better finish than one heavy coat. If clogging develops remove spray button with a twisting motion and clean in mineral spirits. **DO NOT STICK PIN OR OTHER OBJECT INTO CAN.** Gently replace spray button with a twisting motion with top of can and spray button opening pointed away from you. Always clean spray button immediately after use by turning can upside down and pressing spray button until no more paint comes out.

## WARNING

If you scrape, sand or remove old paint, you may release lead dust. **LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE.** Wear a NIOSH approved respirator to control lead exposure. Clean up carefully with a HEPA vacuum and wet mop. Before you start, find out how to protect yourself and your family by contacting the National Lead Information Hotline at 1-800-424-LEAD or log on to [www.epa.gov/lead](http://www.epa.gov/lead).
